

PRONESTOR DISPLAY – Designing a room display

A room display is a web page that can be customized using HTML and CSS.

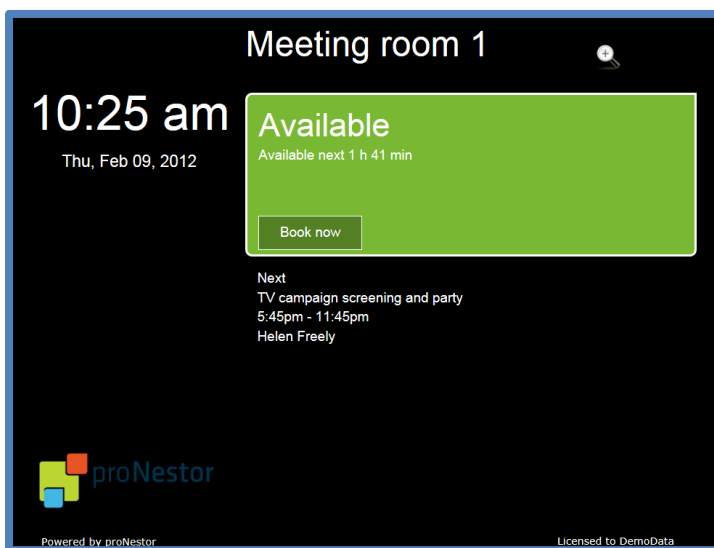

A default display is 1024x768 pixels – which is common for iPad and other 10" displays.

Different sizes can occur if using other tablets/displays – please check the specific device for the actual size.

A display can show different data depending on the room status – this data will be depicted below with assisting text elaborating the different data components that can be shown and formatted in a customized design

This guide describes each screen and the elements – and thus what design elements one needs to take into account when creating a design for PRONESTOR DISPLAY in HTML/CSS.

Status – “Available room”
